

ULTRA BASKETBALL LEAGUE OS

Operator Manual

A working reference for League Operators, Event Directors, Scorers, and Check-In staff — covering every screen an operator uses to run a season, a draft, and a live Game Day.

Version 1.0 — 13 August 2026

Application: app.neonultra.ng

Covers: Season Zero 2026 production build

Screens verified live against production on 13 August 2026 under a SUPER_ADMIN session

How This Manual Works

This manual documents the operator-facing side of Ultra Basketball League OS — the internal application at `app.neonultra.ng` used to run the league: clubs, players, coaches, drafts, fixtures, and live Game Day scoring. It does not cover the public website (fans, standings, live scores) except briefly in Section 16.

Every screen in this manual was walked live against the real production application on 13 August 2026, under an authenticated SUPER_ADMIN session, and the layouts below reproduce the actual navigation structure, field labels, and real Season Zero 2026 data observed at that time (club names, fixture times, coach names, etc.). The screen diagrams are clean schematic mockups rather than literal photographs — they show real structure and real labels, not a pixel-for-pixel photo.

Data shown is real, not sample data.

Every club, coach, fixture time, and count in this manual is Season Zero 2026 production data as it existed on 13 August 2026. Numbers will change as the season progresses — use this manual for layout and workflow, and the live application for current numbers.

Conventions used in this manual

Convention	Meaning
<code>/gameday</code>	A URL path in the application, relative to app.neonultra.ng
<code>game:operate</code>	A named permission checked by the application before allowing an action
<code>Start game</code>	A button or control exactly as labeled in the interface

Roles & Permissions

Every signed-in user holds one or more roles. Roles grant permissions; screens and actions check permissions, not roles directly. This is the real permission table read from the live application code.

Roles

Role	Typical use
SUPER_ADMIN	Full system access — every permission in the system
LEAGUE_OPERATOR	Day-to-day league operations: rosters, drafts, fixtures, scoring, check-in, content, media
OFFICIAL	Game Day scoring authority: operate the scorer console, confirm results
VOLUNTEER	Check-in only — cannot score games or access admin screens
TEAM_MANAGER	View their assigned club's roster, submit availability
COACH	View their assigned club, training records
SCOUT	View stats, manage scout notes
VENDOR / MEDIA / PLAYER / FAN	Narrower, mostly self-service roles

Permissions that matter most on Game Day

Permission	Held by	Unlocks
game:operate	SUPER_ADMIN, LEAGUE_OPERATOR, OFFICIAL	Scorer console: start, score, undo, incidents
result:confirm	SUPER_ADMIN, LEAGUE_OPERATOR, OFFICIAL	Finalize and reopen a game result
check-in:operate	SUPER_ADMIN, LEAGUE_OPERATOR, VOLUNTEER	/gameday/checkin only
operations:manage	SUPER_ADMIN, LEAGUE_OPERATOR	League Command Center, admin screens
draft-event:operate	SUPER_ADMIN, LEAGUE_OPERATOR	Run a live Draft Day session

Why a Volunteer can check in players without scorer access

The Check-In screen accepts *either* `game:operate` *or* `check-in:operate` — so a Volunteer holding only the narrower permission can run check-in without also being granted the ability to score games or reach admin screens. This is the correct least-privilege setup for a check-in desk.

Signing In & Navigation

Sign in at `/login` with your email and password. After sign-in you land on the Dashboard. The top navigation bar is present on every authenticated screen and never changes shape — only what's inside the dropdowns changes with what you're allowed to do.

Ultra Basketball

LEAGUE OPERATING SYSTEM

Dashboard

Game Day

Operations ▾

Clubs ▾

Events ▾

Announcements

Your Name

ROLE · SUPER_ADMIN

The four dropdown menus expand to the full navigation tree below.

The full navigation tree

Top-level	Dropdown items
Dashboard	— (direct link, <code>/dashboard</code>)
Game Day	— (direct link, <code>/gameday</code>)
Operations ▾	Overview, Launch, Draft Ready, Data, Search, Imports, Training, Vendors, Orders, Content, Media, Audit
Clubs ▾	Clubs, Athletes, Coaches, Coach Selection, All-Star Rosters, Tryouts, Standings
Events ▾	Events, Fixtures, Exhibition, Draft Day, Drafts, Cohort, Applications, Check-in
Announcements	— (direct link, <code>/announcements</code>)

Menu items you don't have permission for simply don't render — the navigation bar itself narrows to match your role, so what you see is always what you can actually use.

Dashboard — Operations Mission Control

Your landing page after sign-in. A single screen answering: is anything live right now, is anything broken, and what needs attention today.

What the six tiles mean

Tile	What it's counting
Live games	Games currently in progress right now, anywhere in the league
Awaiting finalization	Games that have ended but haven't been confirmed/finalized yet
Missing rosters	SeasonClubs below their expected player count
Missing officials	Fixtures with no official assigned — currently 12/12 , i.e. every fixture. Officials are a real outstanding item, not a bug.
Fixture conflicts	Fixtures flagged for a scheduling/venue conflict — also 12/12, tied to the same officials gap
Standing failures	Standings rows that don't reconcile against recorded results

Read this dashboard before every operating session

The "Missing officials" and "Fixture conflicts" tiles were both showing 12/12 (every fixture) as of 13 August 2026 — worth resolving or explicitly accepting before Game Day, since this dashboard is the fastest way to see it.

Game Day Control Center

The Event Director's primary screen during a live event. Shows what's live right now, what's next, the day's progress, every club's readiness, and the full running order with one-tap Start / Open display controls.

Start game

Open display

Club readiness shows all 8 clubs; running order lists all 12 fixtures in order (3 shown here).

What each panel does

- **Live now / Next game** — always shows the true current state; empty until the first game starts.
- **Day progress** — a single glance at how far through the 12-game day you are.
- **Club readiness** — pulled from Player Check-In in real time. READY only once every rostered player for that club has a check-in status and the head coach is confirmed present.
- **Running order** —

Start game

 opens the fixture's Scorer Console and marks it live;

Open display

 opens the venue projector clock view for that game in a new context.

Scorer Console

The single screen the Head Scorer uses for an entire game: start, score, shot clock, undo, incidents, and finalize. Reached by tapping `Start game` on the Game Day Control Center running order.

Once a game is started

The header becomes a sticky bar (stays visible while you scroll) showing the running score, half, game clock, shot clock, and an Ultra Time indicator during the final 60 seconds of Half 2 (when all points are automatically doubled by the Ultra Rules Engine).

Control	What it does
<code>+1 +2 +3 +4</code>	A grid of large touch buttons — one tap selects the point value <i>and</i> submits in the same action. No separate "confirm" step.
Shot clock	Start / Reset controls, coordinated with the Shot-Clock Operator
<code>Undo</code>	Reverses the single most recent scoring event
Manual correction (collapsible)	For corrections beyond the last event — always state the reason out loud before using it
Incidents panel	Report a delay, player unavailability, clock correction, or interruption; resolve open incidents
<code>Finalize</code>	Locks the result. Only use after the three-way score verification described in the Scorer Quick Guide.

Never guess a score. Never finalize an unverified score.

Compare the digital state, the Assistant Scorer's visual verification, and the manual paper sheet before finalizing — in that priority order if they ever disagree.

Player Check-In

Marks each rostered player's Game Day attendance. This is attendance only — it never changes a player's permanent roster or club assignment.

Ultra Basketball

LEAGUE OPERATING SYSTEM

Dashboard

Game Day

SUPER_ADMIN

← Back to control center

Player check-in

Game Day attendance only — does not change permanent roster.

Rostered | Present | Late | Absent | Not checked in

Apex — 0 / 8 present

Bamidele Taiwo

PRESLATEABSEN/A

Emmanuel Godday

PRESLATEABSEN/A

Friday Jack sifon

PRESLATEABSEN/A

Grouped by club, all 8 clubs on one scrollable page. Each of the four buttons is a one-tap submit.

The club readiness grid on the Game Day Control Center reads directly from this screen's data — checking players in here is what turns a club's readiness card from WARNING to READY.

Clubs

Club is the permanent brand identity (name, colors, logo); SeasonClub is that club's team in one specific season and division. A club can exist across many seasons.

All 8 real Season Zero clubs, 4 Men's / 4 Women's Division.

Tap **View club** on any card to reach its detail page: roster, coach assignment, club logo upload (requires `media:upload`), and — for users with `club:manage` — edit and archive controls. Use **Create permanent club** only for a genuinely new club; a new season for an existing club is a SeasonClub, not a new Club.

Athletes & Players

Athlete is a person's permanent identity. Player is that athlete's registration for one season — this is where **Player status** and **SeasonClub** assignment live.

Player status	Meaning
DRAFT_ELIGIBLE	Registered for the season, not yet assigned to a club
DRAFTED	Assigned to a SeasonClub via the Main Draft or Secondary Draft

Each row shows the athlete's name, latest season, current SeasonClub (or "Unassigned"), and player status. Tap through to a player's detail page for full profile, photo, and history. **Create athlete** is for onboarding a person who has no application on file — prefer the Applications pipeline (Section 12) when one exists.

Coaches & Season Zero Coach Selection

Coach Selection is where an approved coach Application becomes an actual staff assignment. It never auto-selects — a coach is only provisioned once explicitly marked here.

Ultra Basketball

LEAGUE OPERATING SYSTEM

DashboardGame DayClubs ▾

SUPER_ADMIN

← Back to coach operations

SEASON ZERO

Coach selection review

PENDING | SEASON ZERO SELECTED | NOT SELECTED

Applicant	Status	Division	Staff	Decision
olusegun imah	SELECTED	MEN	UBS-000001	dropdown ▾

One row per approved coach Application; the Decision column is a live dropdown (PENDING / SEASON ZERO SELECTED / NOT SELECTED) plus a division selector.

Selecting a coach here issues their Ultra Staff ID (format UBS-000001) and creates the Staff record — but does *not* assign them to a club. Club assignment happens separately (via the Club detail page or the Draft), so a coach can be "selected" and still be a reserve with no club, which is a normal, valid state.

All-Star / Exhibition Rosters

Builds the Zenith and Pulse exhibition rosters for the Novelty Match — architecturally isolated from competitive standings, competitive fixtures, and competitive club assignments. Nothing done here can affect a real league result.

Ultra Basketball

LEAGUE OPERATING SYSTEM

Dashboard

Game Day

SUPER_ADMIN

ALL-STAR EXHIBITION

Zenith / Pulse rosters

Each team: 2 male + 2 female players, 2 male + 2 female coaches, built from the current roster pool.

Team

Zenith ▾

Player or coach

Select from the current roster pool ▾

The dropdown lists every currently-rostered player and currently-selected coach, e.g. "AFOLABI PECULIAR (Vortex) — Point guard".

Once composition is correct, **locking** a team validates the 2M/2F player and 2M/2F coach quota before allowing the lock — it will refuse to lock an incomplete or unbalanced roster.

Applications

The front door for every participant — players, coaches, scouts, vendors — before they get any sensitive role, staff profile, or roster assignment. Nothing downstream (Player, Staff, SeasonClub assignment) happens without first passing through here.

Export application data

Export all Excel

Export Players / Coaches / Scouts / Vendors

Email applicants

Audience ▾Status ▾Subject ____ Message ____

Send email

Intake toggles, Excel export by participant type, and a merge-tag bulk email tool (sends one at a time so {{name}}/{{firstName}} personalize correctly).

- **Application intake** — temporarily closes public submissions for a role (e.g. once you have enough players) without touching applications already submitted.
- **Export** — downloads an Excel workbook per participant type for offline review.
- **Email applicants** — filter by audience and status, personalize with {{name}} / {{firstName}}. Requires SMTP to be configured.

Below these tools is the review queue itself, where each Application is approved, rejected, or (for coaches) marked for Season Zero selection.

Draft Day & Drafts

There are two related but distinct systems:

System	What it's for
Draft Day (DraftEvent) — /draft-events	The server-authoritative Main Draft ceremony — squad allocation with a live reveal, REHEARSAL/LIVE operating modes, and full audit trail. Season Zero's Main Draft shows as COMPLETED — 8 squads, 18 allocations.
Drafts (Draft/DraftPick) — /drafts	The Secondary Draft mechanism — round-by-round individual picks (reserve→reveal→confirm) used for later roster additions after the Main Draft.

REHEARSAL vs LIVE mode is the most important distinction in this system

A DraftEvent running in REHEARSAL mode never writes to a Player's real seasonClubId or a club's real coach fields — it's fully safe to rehearse. Only LIVE mode persists an allocation as an official roster change. Always confirm which mode you're in before running a session.

Use **Create DraftEvent** only when starting a genuinely new draft ceremony (e.g. a future season's Main Draft) — not for individual roster corrections, which go through the Secondary Draft or a direct, audited player-record correction.

Fixtures & Standings

Ultra Basketball
LEAGUE OPERATING SYSTEM

DashboardGame Day

SUPER_ADMIN

Fixtures

10:00	Eclipse vs Ember — Women's Division	SCHEDULED
10:35	Apex vs Flux — Men's Division	SCHEDULED
11:10	Eclipse vs Halo — Women's Division	SCHEDULED

All 12 fixtures, 15/08/2026, NIS Outdoor Court, National Stadium Surulere

Fixture list — tap through to a fixture for officials, venue, and its linked Game record.

Standings ([/standings](#)) shows Men's and Women's Division league tables side by side, sorted by league points. Standings recalculate automatically whenever a game is finalized or reopened — you never edit a standings row directly.

Use **Create fixture** only for a genuine new fixture. Changing an existing fixture's schedule after Game Day planning has started is a real schedule change — confirm with the Event Director first.

Operations — League Command Center

The commissioner-level view across the whole league: readiness, live operations, commerce, and system health, in one screen.

Commerce & Fan Experience
Reservations · Food Orders · Revenue · Sponsor Impressions

System Health
Database: Connected
Storage: Configured

Four panels plus five quick links to dedicated Incidents, Runbooks, Tasks, Launch Readiness, and Display Monitoring screens.

This is a distinct, broader system from the Game Day incident panel described in Section 6 — `/incidents` and `/runbooks` are general league operations tools, not specific to a single live game.

Other Operations menu items

<code>/launch-readiness</code>	P0/P1/P2 launch blocker tracking for the season
<code>/draft-readiness</code>	Pre-draft readiness dashboard: players, groups, clubs, coaches, media, presentation
<code>/data-readiness</code>	Data-quality checks across the league
<code>/participants/search</code>	Global participant search across athletes, staff, applications
<code>/imports</code>	Bulk data import tools
<code>/media</code>	Media asset library (logos, photos) and upload approval
<code>/audit</code>	Full audit log — every consequential action, who did it, when

Public-Facing Pages

These require no login and are what fans, broadcast, and venue displays see. Operators should know they exist and how they relate to the operator screens, without needing to manage them directly.

Page	Purpose
/live	Public match centre — real-time scores across all live games
/public/clubs	Public club directory
/public/fixtures	Public fixture list
/public/standings	Public league tables
/broadcast/game/[gameId]/scorebug	Read-only broadcast overlay — mirrors the scorer console, has no input controls
/display/game/[gameId]/clock	Venue projector display — opened via "Open display" on the Game Day Control Center

The public pages are always downstream, never upstream

Every public page reads from the same authoritative Game/Fixture state the scorer console writes to. There is no way to affect a real score from a public or broadcast page — they are display-only.

Incident & Emergency Quick Reference

For the full Season Zero Game Day incident matrix, emergency procedures, and manual fallback paperwork, see the dedicated Game Day print pack (documentation/gameday/season-zero/). The summary that matters most while you're at the console:

Authoritative score hierarchy — never guess, resolve in this order

- 1. The authoritative digital Game state (the scorer console's current record)
- 2. Verified visual/operator state (what the Head Scorer and Assistant Scorer both witnessed and agree happened)
- 3. The signed manual paper score sheet

Fast paths

Situation	Do this
Wrong score just entered	Call "Hold score," then use <code>Undo</code> on the scorer console
Scorer device fails	Backup device logs into the same fixture — confirm current score/clock before entering anything new
Internet drops	Switch to backup network; if that also fails, go to full manual paper scoring immediately
Accidentally finalized	Do not re-finalize — Event Director authorizes a Reopen , executed via <code>result:confirm</code>
